

1.2 Data Quality Assessment

Overview: The purpose of this section is to check the completeness, accuracy, and consistency of the dataset.

Results:

- The dataset contains **6,617,426 rows**
- There are **1,287 unique athletes** and **92 unique teams**.
- The data covers the period from **October 15, 2018 to October 21, 2025**.
- Three data sources are included:
 - **Kinexon** – 4,073,754 records
 - **Hawkins** – 2,492,372 records
 - **Vald** – 51,300 records

The main source is **Kinexon**, which represents the majority of the dataset.

Data Quality Findings:

- **No missing or invalid player names** were detected.
- **541 athletes** have data from more than one source, showing overlap between systems.
- All player identifiers follow a consistent format (e.g., **PLAYER_####**), supporting reliable linking across tables.

Interpretation:

The dataset is complete and consistent. Kinexon and Hawkins provide most of the data, while Vald contains a small portion. The long date range supports time-based analysis. Clean identifiers make it possible to combine and compare data across systems.
